

Medical Imaging Record Report

Patient Information

Name: Mel Lefleur

Age: 70

Date: Day of admission

Diagnosis: Right Hip fracture, Pneumonia, COPD

Medical History

COPD, Osteoarthritis, Diabetic type 1

X-Ray Report

Findings

The X-ray of the right hip shows a fracture in the femoral neck region. There is visible displacement at the fracture site. No signs of comminution or bone fragmentation are observed. The surrounding soft tissues appear normal with no signs of additional injuries or abnormalities.

Impression

The radiographic findings are consistent with a femoral neck fracture of the right hip with displacement.

Recommendations

1. Orthopedic consultation for further management.
2. Consideration for surgical intervention to realign and stabilize the fracture.
3. Pain management and immobilization of the affected limb.
