

Ultrasound Report

Patient Information

Name: Suzanne Gordon

Age: 37

Date: 1 week prior to C-Section

Diagnosis: 38 weeks Gestational

Clinical Information

Gestational Age: 38 weeks

Indication: Planned C-section

Past Medical History: Gestational Diabetes

Ultrasound Report

Fetal Position: Cephalic

Placenta: Anterior, grade II maturity

Amniotic Fluid Index (AFI): 14 cm (Normal Range: 8-18 cm)

Estimated Fetal Weight: 3500 grams (7.7 pounds)

Fetal Heart Rate: 145 bpm (Normal Range: 110-160 bpm)

Fetal Movements: Normal

Biophysical Profile: 8/8 (Normal)

Maternal Findings:

Uterus: Normal size, no anomalies

Ovaries: Both ovaries normal in size and appearance

Cervix: Closed, length within normal limits

Amniotic Fluid: Normal volume, no evidence of oligohydramnios or polyhydramnios

Additional Notes:

Gestational Diabetes: Well-controlled, no evidence of fetal macrosomia (large baby due to diabetes)

No evidence of placental abruption or previa

Comments:

Ultrasound findings are consistent with a healthy pregnancy at 38 weeks gestation.

No abnormalities detected that would contraindicate a planned C-section.
